PROFESSIONAL SUMMARY

Software Engineer with production experience in fintech backend development using Laravel, PHP, and MySQL. Built and maintained core banking features for a live lending platform, with strong fundamentals in REST APIs, query optimization, and cross-functional delivery. Applies prompt engineering and AI tools in daily development to write cleaner code and move faster.

EXPERIENCE

•Associate Software Engineer

Aug 2024 – Present

Manafa Technologies | Onsite

Lahore, Pakistan

- Developed a Loan Management System to handle end-to-end loan workflows, replacing a legacy process and removing the prior funding cap.
- Built three collateral modules — Guarantee Agreement, Promissory Note, and Real Estate Mortgage — to support document handling within the admin workflow.
- Implemented funder management with support for multiple opportunities under a single loan, enabling one-time commodity purchases.
- Diagnosed and fixed production bugs in Laravel and PHP, improving overall system stability.
- Integrated LLM capabilities into the platform and used AI-assisted development tools to speed up feature delivery and debugging.
- Optimized MySQL and MongoDB queries to improve database performance and reduce query load times.
- *Skills: Laravel, PHP, MySQL, MongoDB, REST APIs, React, Vue, n8n, OpenAI API, Prompt Engineering, Postman, Git*

•Back End Developer Intern

Sep 2023 – Oct 2023

KS Technologies | Onsite

Lahore, Pakistan

- Developed and integrated RESTful API endpoints and CRUD modules in Laravel, extending core application functionality to support new business requirements.
- Debugged and optimized backend workflows in PHP, contributing to improved system performance and more reliable API request handling.
- Implemented frontend UI updates using HTML, CSS, and JavaScript, enhancing user interaction flows within the application.
- *Skills: Laravel, PHP, MySQL, REST APIs, HTML, CSS, JavaScript*

•Data Science Trainee

Oct 2022 – Dec 2022

Expert System Solution | Onsite

Lahore, Pakistan

- Applied Python libraries (Pandas, Matplotlib, Seaborn) to build data visualizations from real-world datasets during structured training sessions.
- Gained foundational knowledge of machine learning concepts, model evaluation, and data preprocessing techniques.
- *Skills: Python, Pandas, Matplotlib, Seaborn, Machine Learning Fundamentals*

PROJECTS

•Synboards — Real-Time Collaborative Kanban Board

June 2026

Self-learning | GitHub

- Built a multi-user Kanban board with conflict-free real-time sync using Yjs (CRDT) over y-websocket — column and card operations (create, edit, delete, drag-and-drop, reorder) propagate to everyone in the room across devices and networks.
- Implemented offline support and persistence with y-indexeddb local caching and LevelDB server-side storage, so boards survive refreshes, work offline, and reopen on any device via a shareable room link.
- Added live presence (avatars and cursors) via Yjs Awareness, connection status indicator, undo/redo, persisted user identity, and a fully RTL English/Arabic interface.

– Tech Stack: React, Vite, Yjs (CRDT), y-websocket, dnd-kit, Tailwind CSS

•**RAG Question-Answering Pipeline**

May 2026

Self-learning | [GitHub](#)

- Built an end-to-end Retrieval-Augmented Generation pipeline: document ingestion, chunking, embedding generation, vector storage, semantic retrieval, and answer generation grounded in retrieved context.
- Implemented top-k similarity search over embedded chunks to fetch relevant context at query time and return answers with source citations, reducing hallucinations by grounding responses in the source documents.
- Tech Stack: Python, OpenAI API, Vector Database, Embeddings

•**Custom Contact Form Package**

Apr 2024

Self-learning | packagist.org/packages/alisha/customcontactform

- Published a reusable Laravel Composer package with plug-and-play contact form integration, built-in validation, email delivery, and configurable fields.
- Eliminated repetitive development effort across multiple Laravel projects by packaging common contact form logic into a single installable library.
- Tech Stack: Laravel, PHP, Composer, SMTP Mail

•**Social Media Content Uploader**

Apr 2024

Self-learning | [View Demo on LinkedIn](#)

- Built a Laravel tool to upload and auto-publish images/videos to YouTube, Facebook, and Instagram via official APIs, enabling multi-platform distribution from a single interface.
- Tech Stack: Laravel, PHP, YouTube Data API, Facebook Graph API, Instagram API

•**Debris Glacier Detection System**

Apr 2023

FCIT – Final Year Project

- Developed a deep learning framework for automated monitoring of debris-covered glaciers from satellite imagery, integrated with the Space & Science Department.
- Tech Stack: Python, Deep Learning, Remote Sensing, Image Processing, CNN

EDUCATION

•**BS in Information Technology**

Dec 2020 – Jun 2024

Faculty of Computing and Information Technology, Lahore

CGPA: 3.3 / 4.0

TECHNICAL SKILLS

Backend: PHP, Laravel, MySQL, MongoDB, REST APIs, Python

Frontend: React, JavaScript, jQuery, HTML5, CSS3, Vue.js

Tools & Platforms: Git, GitHub, Postman, Linux, MySQL Workbench, n8n

AI & Development: OpenAI API, Prompt Engineering, AI-Assisted Coding, LLM Integration, GitHub Copilot, n8n

Soft Skills: Problem Solving, Teamwork, Time Management, Adaptability, Leadership

ACHIEVEMENTS & CERTIFICATIONS

•**Monthly Performer Award:** Manafa Technologies

2025

•**Generative AI for Software Development:** DeepLearning.AI / Coursera

2026

•**SQL Certified: SQL Basic & SQL Intermediate** HackerRank

2024
